REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior arts fail to teach or fairly suggest a two-way satellite communication system, comprising:

a network control cluster (NCC) configured to dynamically manage bandwidth associated with a plurality of return channels; and

a hub configured to communicate with the transceiver over the plurality of return channels, wherein the hub provides connectivity between a transceiver and a packet switched network, in combination with other limitation as specified in the independent claim 1.

Regarding claims 12 and 34, the prior arts fail to teach or fairly suggest a method for exchanging frames over a two-way satellite communication system, the method comprising

establishing connection to a packet switched network;

dynamically assigning bandwidth provided over a plurality of return channels to a plurality of remotes;

sending data via ALOHA channels to dynamically allocate additional bandwidth if the determining step establishes that insufficient bandwidth exists; and

generating signals associated with the frames using a plurality of carriers each of the carriers being a Time Division Multiple Access stream, in combination with other limitations as specified in the independent claim 12 and 34.

Regarding claim 23, the prior arts fail to teach or fairly suggest a two-way satellite communication system for exchanging frames, the system comprising:

means for dynamically managing bandwidth associated with the plurality of return channels;

means for demodulating the signals that are received from each of the plurality of return channel, said means for demodulating being communicatively coupled to the means for dynamically managing bandwidth', and

means for communicating with a transmitting means over the plurality of return channels, wherein the communicating means provides connectivity between the transmitting means and a packet switched network, in combination with other limitation as specified in the independent claim 23.
